Davidova E.P. Creative thinking as a necessary condition of education heuristics

The article examines the role of creative thinking in the system of human action and, accordingly, in education, aimed to improve the development of this ability. The concept of developmental education, which underlies the development of creative thinking, is considered. The relevance of creative intelligence in modern society and the importance of acquiring the quality of heuristic by education are emphasized. The creative potential is researched in the anthropological, historical and psychological concepts. Such elements of creativity as independence and freedom from previous knowledge and experience are considered. To enter the anthropo-cultural system of transformations, the human has to use heuristic methods in the learning process, which contribute to the formation of creative personality, thus solving an important social problem.

Key words: creative thinking, problem situation, developmental education, heuristic education, the concept of L.S.Vygotsky
