***Visotskiy V.V.* Ethnocultural development of the Ukrainian population of Voronezh province in the period from 1861 to 1925 year**

The article considers the peculiarities of ethnocultural development of the descendants of the Ukrainian migrants of Voronezh province during the period from 1861 to 1925 for the purpose of picking out the factors exerting the influence on the development of the processes of assimilation in the investigated ethnic environment. The scientific novelty of the work consists in the facts that for the first time in the course of brief complex ethnocultural description of the descendants of the Ukrainian migrants of the investigated region were considered such elements as the sphere of education and cultural and educational activity. So the following conclusions are drawn in the work: in the investigated ethnic environment changes that have touched all the elements of ethnoculture, conditioned by the influence of neighboring Russian population and also thanks to the development of integration processes connected with the forming of new socio-economic relations gradually begin to take place; despite the fact that a considerable part of the descendants of the Ukrainian migrants tried to preserve the main peculiarities typical of the Ukrainian ethnic culture at the self-conscious level, they had already come out of the lap of their ethnic circle and took the path of complete merging with Russian nation.

Key words: ethnic, nation, socio-economic.
