***Roudenko A.M. Sociovital explication of human's existence: gnoseological aspects***

Gnosiological aspects of a social and vital explication of human existence are analyzed. The essence of human existence does not open frameworks of this or that definite binarity (for example, «existence/essence», «existence/not authenticity», etc.), and at the complex, polyvariant explication having social and vital character. Therefore the classical binary antagonism in an explication of existence should be overcome within the framework of methodology of polyalternativeness.

Key words: existence, human, gnosiology, truth.
