Soultanov R.R. Interdisciplinary interaction of the doctors as one of the ways to increase the efficiency of the treatment process

The article is devoted to the problem of increasing the efficiency of the practice of interdisciplinary groups of doctors in the process of treatment and diagnostics. The analysis of the viewpoints of various researchers on the definition of the term “interdisciplinary” is given. Special emphasis is put on considering the phenomenon of “interdisciplinarity” in strong connection with the tendency of the possible formation of new objectness in theory and practice on the basis of which the author accepts the definition of the “interdisciplinarity” as the sphere of connection, or the common sphere for two objectness. The given definition is used to discover and analyze the basic reasons for the essential necessity of interdisciplinary coordination of doctors in the treatment and diagnosing process. The author of the article comes to the conclusion that the given coordination, the prerequisite of which is the horizontal coordination of actions, contributes to increasing the efficiency of the health-care delivery.

Key words: the interdisciplinary coordination, the formation of new objectnesses, the efficiency of the medical work, a medical institution
