Ananyina M.A., Zakharchenko M.V. Synergetic ideas of language education optimization at university

The authors discuss the problem of optimization of professional language education. The theoretical analysis of optimization problem of language training as a main component of professional education, the definition “optimization” and optimization methods guided by synergetic ideas are given. The demonstration of distinct synergetic principles in the system of optimization methods is examined. Two basic optimization methods are comprehensive planning of education tasks, training tasks, development tasks and a rational combination of management and self-government of educational activity of students. In the article the system of approaches to optimization is said to have an idea of self-development as a result of which the unity and the intensification of all components of educational process take place. The result of the authors’ research work is a creation of the remote unit ‘English for managers’. The using of this unit during the educational process allows students to organize their independent work optimally.

Key words: optimization, means of optimization, criteria of optimization, professional and language education, synergetic approach, synergetic principles.
