Social and economic position of broken families in the Republic of North-Ossetia-Alania

The article presents some aspects of the socio-economic situation of single-parent families in the Republic of North Ossetia-Alania. On the basis of statistical data and a survey of 110 single-parent families it examines the differences in the level of material well-being of families depending on their genesis and per capita income. The author comes to the conclusion that single-parent families in Vladikavkaz are families with very limited material resources and with limited choices change their lives for the better and a more balanced regional policy for their better adaptation in social space.

Key words: Republic of North Ossetia-Alania, single-parent families, living, material well-being, income per person.
