Development of formal ways and processes through seme components deriving of wordbuilding meaning

Article is devoted to the development of formal ways of seme components deriving of word-formation meaning on material of modern English. The formal seme identification can be based on word-formation processes and models, and be determined by the context. Hierarchical relations of the categorical semes within the part-of-speech interconnection are in the focus of researcher's attention. Subcategorical semantics imposes certain restrictions on seme identification. Semes get the status of the main or private depending on the degree of their manifestation in the semantic structure of the interacting class of words.

Key words: part-of-speech interaction, key and peripheral semes, word-formation meaning, derivatives, word building processes.
