Role of information in the field of cognitive activity of students

The article deals with the role of the information field during the training future specialists. The article considers the learning process as a complex system in operating information level. One of the parts of this system coordinates with the developing of skills taking their bearings in modern information space and helps to find, analyze, perceive and transmit the necessary information. One of the most impotent ideas in the teaching of foreign languages is the developing education. The formation of students' personal activity becomes the main objective of training. The authors draw attention to the purpose of the interaction in the system "teacher-student" - the formation of theoretical and practical thinking, cognitive activity and personal development of the future professional.

Key words: information field, the process of learning, cognitive activity, the student's personal development, self-employment, communicative competence of foreign language, professional culture.
