Sources of philosophic and constructivism analysis of knowledge rational nature

The article is devoted to the interpretation of the term "knowledge" in constructivism classical view of knowledge as the expression of objective essence, and therefore about the nature, role and essence of knowledge itself, questioned in antiquity, but its deployment in the scientific framework gets in the middle of the twentieth century and is associated primarily with the constructivist philosophy. Constructivism insists not just on cognitive activity, but on its crucial importance for the result of the cognitive process. The knowledge is the knower construction and the aim of knowledge is primarily adaptive.

Key words: knowledge, information, constructivism, social constructivism, autopoiesis, radical constructivism, cognitive frameworks
