### **On the status of the education private sector and accompanying problems**

The article examines the process of divergence between the trend of the world community to pay attention to the ability of the private sector in education and the need to improve its status of education and science. Ministry reduces access to higher education, eliminates non-State universities, thereby limiting the alternatives to education. Attention is drawn to the fact that the Act "on education in the Russian Federation" does not contain a specific, unequivocal definitions of educational activities and limited to the definition of "educational activities on the realization of educational programs". It is drawn attention to the obstacle in the development of non-State education sector, reflected in a narrow interpretation of the main objectives of the non-profit organization, not profit for the development of material base of educational institutions. Thus there is the need for the development of holding structures.

Key words: The Bologna policy forum, educational activities, non-profit organization, commercial organization, educational alternatives, holding group of companies, holding relationship.
