### **Unchangeable attributes in the Russian language**

The article touches upon the question of the formation of a new word-class called unchangeable attributes. Unchangeable attributes contain a big group of unchanging words of foreign origin, denoting the feature. These words are not changed in gender, number and are of zero declension. The meaning of feature is expressed syntactically. Simultaneously with the statement in grammar on a special morphological category of words of unchangeable attributes there is a viewpoint due to which all unchangeable words should be referred to the nouns.

Key words: unchangeable attributes, indeclinable attributes, categorical signs of parts of speech, grammatical polyfunctionality
