### **N.S. Trubetskoy's ideas in the context of studying the lexicon of the religious discourse of orthodox Christianity**

According to the outstanding scientist-thinker, the culturologist and the linguist N.S. Trubetskoy comprehension of the Russian national consciousness is impossible without studying the language and the culture of the neighboring nations. This problem of interaction of cultures, interpenetrations of the language phenomena at the lexical level became the most relevant in the XX century, a century of cross-cultural communications and close language contacts. In this regard the question of origin of the terminological lexicon of Russian entering a religious discourse of orthodox Christianity and nominating liturgical attires in the light of N.S. Trubetskoy's ideas is considered.

Key words: scientific activity of N.S. Trubetskoy, Christian discourse, terminological lexicon, attires of priests.
