Frame semantics in motive quality-item “geographical locative”

The analysis of the classified representation of the frame semantics as to motive and nominative qualities of floranimic compound structured composites is given. The representative item “geographical locative” is discussed. It is presented by discourse-logical frame. It has a field and semantic structure as the background of science-cognitive nomination. It is observed the process of acquiring, systematizing and the transfer of naïve knowledge into science one, which is based on definite empirical experience.

Key words: cognitive linguistics, frame, frame semantics, knowledge, discourse.
