### **Federation as a method of the state device: signs and basic classification**

The theoretical and methodological foundations of studies of federalism and the ideological features of federalism as the core of the territorial-political system are considered. Information on the role of the regions in the state foreign policy has been systematized within the framework of existing approaches to the problem of building federal political entities and their practical implementation. The general features of the construction of federative states, the principles of their functioning are revealed. It is analyzed the theoretical discussions about the content of the relations of center-regions in federal states.

Key words: federalism, non-state actors, state centrism, federation.
