Complexity as a property of multiple subjectivity

It is considered metaphysical features of the phenomenon of complexity, studied the transition from the traditional view of complex phenomena and systems to their modern interpretation. An attempt is made to identify the basic approaches to the definition of complexity and adequate means of its knowledge and management, formed in the historical and philosophical tradition. The interrelation of complexity as a philosophical category with the general problem of multiple subjectivity, non-linearity of consciousness is one of the most urgent issues that attracts the attention of modern philosophical thought. The question of the existence of complex thinking is considered in conjunction with the need for the study of multiple subjectivity and is supported by the goal set for it: to deduce new aspects of the cognitive nature.

Key words: complexity, multiple subjectivity, phenomenon of complexity, multiplicity of consciousness, individual, society.
