Ekaterina I. Ensis, Vladimir P. Kolesnikov, Vladimir V. Terekhov

(Krasnodar higher military aviation school for pilots of the Hero of the Soviet Union A.K. Serov, Krasnodar, Russian Federation)

Educational conditions of thinking development of cadets at military higher school in modern education

It is considered the innovative forms and methods of advanced education. As a result of the application of new pedagogical forms of education, the cadet develops intuitive intelligence and acquires a team skill mainly through the figurative method of «learning». At the same time, the cadet's consciousness forms not only an image, but also accepts the algorithm of mental action as a cognitive map for the strategy of action. In this case, the thinking algorithm will become available to cadets of all levels of consciousness. The practical application of the methods developed by the authors will reveal the potential of the trainees and perceive the educational material in a new way, realize its meaning, acquire mental engineering and verbalization skills in order to move to a higher level of consciousness of the trainee as a person. The methods of education developed and proposed in the work will contribute to the development and initial formation of an education platform based on imaginative thinking and synthesis of knowledge. Trends in the development of higher education in modern conditions require changing the form of education to a new form of education, according to the pedagogical methods proposed above, which will contribute to the initial formation of an education platform based on imaginative thinking and synthesis of knowledge.

Key words: education, cultural of education, consciousness, perception, memory, information and intuitive flow.
