Linguistic potential of computer technologies in modern philology

It is considered the origin and development of the computer technologies in philology. The processes in philology make contribution to the discussions in accordance with modern trends in globalization and the revival of the language and culture. The emergence of digital programs influences the development of digital philology, increasing its popularity associated with technological progress. The paper is descriptive in nature, reflecting the current language situation. The authors focused on the linguistic and semantic changes associated with the use of computer technology in philology. The characteristic problems of classical philology are presented as well as the processes leading to a decrease in interest in the traditional discipline. The authors tried to identify existing problems, to classify the relevance of the development of digital philology and linguistic situations that affect the language development.

Key words: computer technologies, digital philology, linguistic direction, semantic analysis, linguistic identity, philological processes.
